Vienna first in California to install Novaerus antibiotic air purifiers
Vienna installs most advanced technology for safer, healthier air

Vienna Nursing & Rehabilitation Center has become the first facility in California to incorporate Novaerus antibiotic air purifiers.

Earlier this month, February 2017, all HVAC units were installed with Novaerus air purifiers as a proactive step to reduce airborne illnesses, including influenza, MRSA, norovirus and Tuberculosis to name a few. Novaerus system uses cutting edge technology that cleans air using plasma, instead of chemicals, leaving behind no harmful byproducts, and making it safe for use around even the most vulnerable populations. Clean air will support Vienna's commitment to health and cut the potential spread of sicknesses. The purifiers work 24/7 to destroy airborne bacteria, viruses, pathogens, odors, and VOCs. Combined with already existing sanitization steps, this will protect families and staff from potential sickness outbreaks.

Vienna is proud to keep Lodi ahead of the curve in becoming the first facility in California to take this huge and critical step in infection control, and thus defending families and staff against sicknesses with the safer, cleaner, and healthier air.
