

# OMNI VR

VIRTUAL REHABILITATION SYSTEM

At Vienna we offer our residents OmniVR technology, a state-of-the-art rehabilitation program which utilizes virtual reality to make therapy more fun and rewarding. OmniVR is designed specifically for the senior population and is tailored to the needs of each participant. The technology is the first of its kind and it's making life for our residents healthier and more fulfilled.

## The OmniVR Difference

- Fosters healthy competitiveness and encouragement amongst residents
- Found to significantly improve endurance among participants
- 90% of all skilled residents are appropriate to use the OmniVR
- Faster results than typical rehab programs
- Makes rehab fun and entertaining for the senior community
- The Omni VR is appropriate for most residents, including those with cardiac, neuro and orthopedic-related diagnoses
- OmniVR can be used in all therapy disciplines: PT, OT, ST

\*Based on preliminary findings. Actual results may vary.

## Charles' Story

Charles came to Vienna with weakness and chronic anemia. He required moderate assistance to go from sitting to standing and could only walk about 10 feet, but he was dedicated to regaining his health. Therapists started Charles on the OmniVR for motivation. The OmniVR gave Charles clear objectives that helped him obtain his goals and monitor his improvements. "At first I thought this would be like a game, but after using it I found it's much more than a game. It works your mind, your eyes, and your arms and gets them all coordinated. It's more than fun, it's a challenge! And it's fun to challenge yourself. It lets you play against yourself so you're constantly improving." Charles returned home after one month and continues using the OmniVR during outpatient therapy at Vienna. Thanks to his hard work he's now healthier, requires little assistance, and is walking independently again.
